Patently Enabled May 2024 – Inventorship of AI-Created Patentable Technology

The purpose of this monthly series Patently Enabled is to share simplified patent related information to assist non-patent practitioners in making the best decisions when considering their intellectual property rights.

In the May edition of Patently Enabled, Emily Ferriter Russo and Anthony A. Kassas explore inventorship of AI-created patentable technology, including who or what an inventor is, the USPTO's requirement for disclosure of inventors and how that applies to artificial intelligence.

For any patent related comments, questions or other inquiries, please contact registered patent attorney Emily Ferriter Russo or Anthony A. Kassas.
